$$f(t) = A_0 + \sum_{n=1}^{\infty} A_n \sin(nwt + y_n)$$

$$-\int_{1}^{\infty} t = A_0 + \sum_{n=1}^{\infty} \left[ A_n \left( \sinh y_n \cos nwt + \cos y_n \sin nwt \right) \right]$$

$$= \frac{a_0}{2} + \sum_{n=1}^{\infty} \left[ a_n \cos nwt + b_n \sin nwt \right] \qquad \left( a_0 = 2A_0, a_n = A_n \sin y_n \right)$$

$$= h = A_0 \cos y_n$$

愛求 do, an, bn.

$$\int_{-\pi}^{\pi} \int (\xi) d\xi = \int_{-\pi}^{\pi} \frac{a_0}{2} d\xi + \int_{-\pi}^{\pi} \sum_{n=1}^{\infty} \left[ a_n a_n x_n w t + b_n s_n w n t \right] \\
= \int_{-\pi}^{\pi} \frac{a_0}{2} d\xi + 0$$

$$= \int_{-\pi}^{\pi} \frac{a_0}{2} d\xi + 0$$

并 askut:

fer we kent = 
$$\frac{\alpha_0}{2}$$
 cos kut +  $\sum_{n=1}^{\infty} \left[ a_n \cos nwt \cos kwt + b_n \sin nwt \cos kwt \right]$ 

$$\int_{-\pi}^{\pi} \int_{-\pi}^{\pi} \int_{-\pi}^{\pi} \cos kwt \, dt + \int_{-\pi}^{\pi} \sum_{n=1}^{\infty} \left[ a_n \cos nwt \cos kwt + b_n \sin nwt \cos kvt \right] \, dt$$

$$= a_n \int_{-\pi}^{\pi} \cos^2 nwt \, dt$$

$$= a_n \int_{-\pi}^{\pi} (1 + \cos 2nwt) \, dt$$

$$= \pi a_n$$

园观我sinkwt再积分多炒得击.

$$\begin{cases} \alpha_0 = \frac{1}{\pi} \int_{-\pi}^{\pi} f(t) dt \\ \alpha_n = \frac{1}{\pi} \int_{-\pi}^{\pi} f(t) \cos nwt dt \end{cases} \Rightarrow \%$$

$$b_n = \frac{1}{\pi} \int_{-\pi}^{\pi} f(t) \sin nwt dt \Rightarrow \%$$

 $\int_{-T_1}^{T_1} \operatorname{sinkx} \operatorname{ax} \operatorname{nx} dx = 0 \cdot n = 1.2.$ 

 $\int_{-\pi}^{\pi} \cos kx \cos nx \, dx = 0 \quad k \neq n$ 

继续排令的寻求史间的而私达到刊

$$f(t) = \frac{\alpha_0}{2} \ddagger \sum_{h=1}^{\infty} \left[ \alpha_h \cos nnvt + \beta_h \sin nvt \right]$$

$$= \frac{\alpha_0}{2} + \sum_{h=1}^{\infty} \left[ \alpha_h \left( \frac{e^{jnvt} + e^{-jnvt}}{2} \right) + b_h \left( \frac{e^{jnvt} + e^{-jnvt}}{2j} \right) \right]$$

$$= \frac{\alpha_0}{2} + \frac{1}{2} \sum_{h=1}^{\infty} \left[ (\alpha_h - jh_h) e^{jnvt} + (\alpha_h + jh_h) e^{-jh_h} \right]$$

= 
$$\frac{a_0}{2} + \frac{1}{2} \sum_{n=1}^{\infty} (a_n - jb_n)e^{jant} + \frac{1}{2} \sum_{n=-\infty}^{\perp} (a_n - jb_n)e^{jant}$$

$$F_0 = \alpha 0/2$$
 ,  $F_n = \frac{1}{2}(\alpha_n - jb_n)$ 

Whan.bn: = 
$$\frac{1}{2\pi} \int_{-\pi}^{\pi} f(t) \left[ \cos nwt - j \sin nwt \right] dt$$
.

$$\begin{cases} F_0 = \frac{\alpha_0}{2} \\ F_n = \frac{1}{2}(\alpha_n - j\delta_n) = \frac{1}{2\pi} \int_{-n}^{n} f(t)e^{-jnut} dt. \end{cases}$$

b-n = -6n

到人看作 T→如,以此推导、

$$\frac{1}{T} = \lim_{T \to \infty} F_n \cdot T = \lim_{T \to \infty} \frac{-1}{T} \int_{-\frac{\pi}{2}}^{\frac{\pi}{2}} f(t) e^{-jnwt} dt \cdot T.$$

$$= \int_{-\infty}^{+\infty} f(t) e^{-jwt} dt$$

$$f(t) = \frac{\sum_{n=-\infty}^{\infty} F_n e^{+jnu_n t}}{F_n e^{+jnu_n t}} = \frac{\sum_{n=-\infty}^{\infty} F_n e^{+jwt}}{\frac{1}{T} \cdot \frac{2\pi}{w}} e^{+jwt}$$

$$= \frac{\sum_{n=-\infty}^{\infty} F_n \cdot T \cdot \frac{1}{2\pi} dw e^{jwt}}{F(jw) \cdot \frac{1}{2\pi} dw \cdot e^{jwt}} \qquad \omega \to 0$$

$$= \frac{\sum_{n=-\infty}^{\infty} F(jw) \cdot \frac{1}{2\pi} dw \cdot e^{jwt}}{F(jw) e^{jwt} dw}$$

$$= \frac{1}{2\pi t} \int_{-\infty}^{+\infty} F(jw) e^{jwt} dw$$

至此新得里叶变换对:

$$F(jw) = \int_{-\infty}^{+\infty} f(t) e^{-jwt} dt$$

$$f(t) = \frac{1}{2\pi} \int_{-\infty}^{+\infty} F(jw) e^{-jwt} dw$$

上述又要求f的必须是绝对可积而,因此还自以们进一文双世。

全g(6)=f(1)e-ot,只要可是例大、g(1)一定会收敛,即到从采用傅贯叶变换。

$$F[g(t)] = \int_{-\infty}^{+\infty} f(t) e^{-\sigma t} e^{-jwt} dt$$

$$= \int_{-\infty}^{+\infty} f(t) e^{-(\sigma + jw)t} dt$$

$$= \int_{-\infty}^{+\infty} f(t) e^{-st} dt \qquad \qquad \text{ and } \sigma + jw = s$$

$$= F(s)$$

可以服出拉氏受换过,

$$F(s) = \int_{0}^{+\infty} f(t) e^{-st} dt$$

$$f(t) = \frac{1}{2\pi j} \int_{\sigma - j\infty}^{\sigma + j\infty} F(s) e^{st} ds$$
